

Amendment to the Specification

Please delete the paragraph beginning at page 4, lines 25-31, with the following new paragraph.

DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENTS

A sleeping compartment 10 for a truck 12 according to the present invention is made up of a plurality of modules or sections 14 and 16 of uniform cross-section configured to mate with one another to form an integral sleeper unit for connection to the aft end of a truck cab compartment 18 as shown in FIG. 1. Cab compartment 18 has at least a driver's seat 9 contained therein, and may also contain a passenger seat as shown in Fig. 2. The modular construction of the sleeping compartment makes it possible to provide customized sleeping compartments of various lengths with a wide variety of amenities using only a few types of modules.
